

VoltCare™

HIGH VOLTAGE PROTECTION

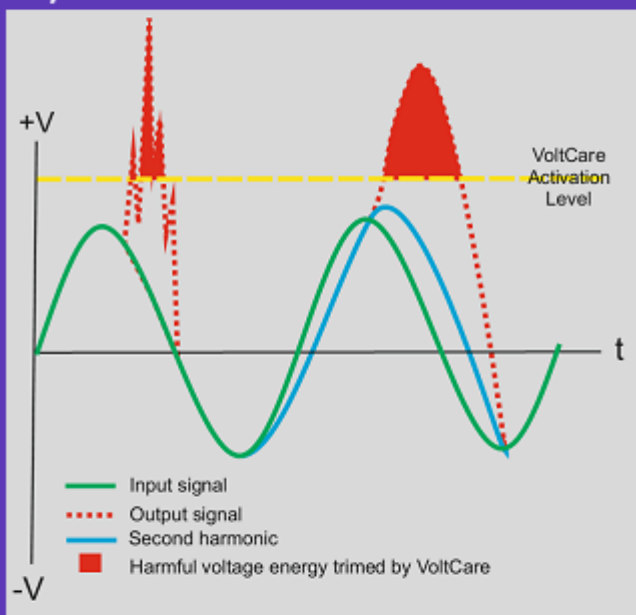

plasturk 

how to work

VoltCare;

- Detects voltage peaks and harmonics,
- Trims voltage wave and loads remaining excess energy to itself,
- Turns this energy to heat energy in itself and doesn't let them enter to your devices or systems.

about more

economical

VoltCare is the most effective and economical high voltage protection.

maintenance free

VoltCare doesn't have any mechanical part that needs maintenance.

easy installation

VoltCare can be installed in a few minutes. VoltCare perfectly fits to standard circuit panels and just needs parallel connection.

10 to 25 nano-seconds precision

VoltCare doesn't have any mechanical part, it works

not disposable

It's life span is about 2-5 years.

no need other equipment

No need to change anything. No need any other equipment such as independent grounding line etc.

interior lightning protection

Whether you have external lightning protection or not, VoltCare makes perfect interior lightning protection by connecting your devices and electrical grid.

NO ENERGY CONSUMPTION

VoltCare products

MODEL	OPERATING VOLTAGE	MAX. LOAD
MP110V/50A	110V (MONOPHASE)	50A
MP110V/100A		100A
MP220V/30A	220V (MONOPHASE)	30A
MP220V/50A		50A
MP220V/100A		100A
TP380V/250A	380V (THREEPHASE)	250A
TP380V/800A		800A
TP380V/2000A		2000A

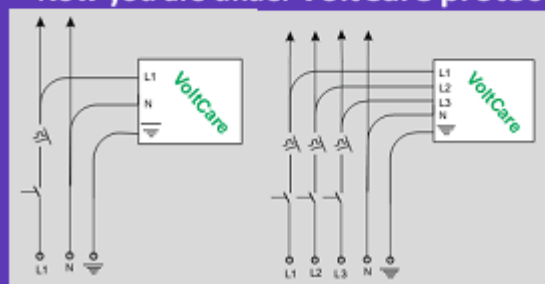

We can design and produce any customer demand.

installation

This installation should be done by a qualified technician.

1. Switch off the main power.
2. Insert the VoltCare on 35mm rail bar in your panel.
3. Attach the appropriate length cables to VoltCare. Use 2,5mm² multi core TTR or NYA-F cables.
4. Make grounding, neutral connections first.
5. Make phase connections to outlet of fuse(s).
6. Be sure all connection is done correctly and tightly.
7. Switch on the main power and see the led-lights on VoltCare.

Now you are under VoltCare protection.
